"Knight Warner progress into robotic solutions".

Read below for more information on this exciting development taking place at Knight Warner

"As a result of enquiries and requests from our customers we took the decision to expand into the area of robotics, which we see as a natural progression of our already excellent automation expertise. The use of robots allows greater flexibility for automation solutions and coupled with the reduction in cost of robot cells, means they are becoming a more cost efficient solution to automation" commented Pete Warner, Sales Director.

It is an accepted fact that robots are an important ergonomic investment that can; work continuously in harsh environments, eliminate repetitive tasks and offer high efficiencies thus providing customers with the vital competitive edge that is necessary to succeed in today's competitive marketplace.

"Following considerable research and deliberation we chose ABB as our preferred supplier of robot cells as they offer, in our opinion, the best variety and quality, as well as a superior support network" explained Technical Director Colin Powell. ***"ABB also give us the added advantage of being able to offer proven standard palletising solutions as well as high speed picking operations. Flexibility with regards to product changes and packaging formats means we can offer our customers a wide variety of exciting leading technology solutions combined with the confidence of working with world leaders in the robotics industry"***.

ABB Robotics partner

At Knight Warner we recognise today's production demands and are capable of providing efficient and cost effective robotic solutions.

If you would like more information on how we can help you maximise your production objectives please contact us.
